Company Description

i.BioCeuticals is the exclusive North American supplier of MASQUELIER'S® OPCs and MASQUELIER'S® French Maritime Pine Bark Extract products. We are part of a global team working in partnership with the International Nutrition Company of The Netherlands (I.N.C.) and its contract production facility, Berkem S.A., of Gardonne, France, to maintain and deliver the exact quality and consistency of the authentic science-related materials discovered by Dr. Jack Masquelier.

The story of Masquelier's scientific discovery of OPCs, and the subsequent decades of patents and ongoing science, is the important component that sheds light on these categories of products. The MASQUELIER name represents solid scientific research, clinical studies, rigorous controls and comprehensive identity testing that ensures quality, consistency in composition ensuring the known health benefits that impact the vital functioning of the whole body.

Key Personnel

Trademarked Proprietary Ingredients

- MASQUELIER'S® OPCs
- MASQUELIER'S® French Maritime Pine Bark / FLAVAN®
- ANTHOGENOL®

MASQUELIER® trademarked products represent an unparalleled scientific tradition. Honoring the wisdom of nature and the highest standards of the scientific community, these premium branded ingredients represent the integrity of a series of significant scientific discoveries, patents, and a large body of science spanning sixty years.

"We Have the Human Body Covered in Health", well represents MASQUELIER'S® OPCs and MASQUELIER'S® French Maritime Pine Bark Extract as they are efficacious in the broadest possible range of physiological processes, are extremely biologically active, and are rapidly absorbed.

Major Markets

In the dietary supplement market, MASQUELIER'S® OPCs and MASQUELIER'S® French Maritime Pine Bark Extract provide health benefits in seven important categories:

- cardiovascular & circulatory health
- collagen & skin health
- superior antioxidant
- leg veins
- eye health,
- sports & recovery
- anti-aging.

The MASQUELIER products support the whole-body health and the longevity of human life through 3 primary biological functions: protects and strengthens the cardiovascular and circulatory system; strengthens and rebuilds collagen; and acts as a superior antioxidant in both lipid and aqueous environments.

Scientific Merit

Since 1948, when Dr. Masquelier first discovered OPCs, a substantial body of clinical science has been performed. Based on Dr. Masquelier's pioneering and innovative role in the isolation, identification and therapeutic applications of OPCs, two French medicines were approved, known to exert intense vasoprotective effects, as well as the protection and renewal of collagen throughout the body.

MASQUELIER'S® OPCs is identified and authenticated by way of Complex Phytonutrient Authentication (CPA), which directly links our products with decades of product-specific science. This is why MASQUELIER'S® OPCs, and MASQUELIER'S French Maritime Pine Bark Extract cannot be overlooked when considering formulas intended to benefit the underlying health and longevity of the human body.

In 2008, International Nutrition Company and I.Bioceuticals celebrated "Sixty Years of Science", acknowledging Masquelier's lifetime of scientific achievements.
